the European Union

EUREM - EUROPEAN ENERGYMANAGER TRAINING

This project is funded by the European Union

Tracking the implementation of energy efficiency projects

POSITIVE

- + Data quality and reliability of energy concepts is very high; praxis project with real figures and supported by a tutor.
- + Participants can use praxis proven checklists, Excel calculation tools and training materials.
- + Participants benefit from the personal expert network “EUREM Community”.
- + Commitment of both participant and company (company pays training fee, participant brings in free time).

NEGATIVE

- Energy concept shows only savings potentials. Not real savings. Only a few projects are being implemented during the EUREM training duration.
 - After finishing the EUREM training, no reporting obligation of alumni.
- Surveys, telephone calls and bachelor/master thesis to get the “real” energy savings of implemented energy efficiency projects.
