# CLIMAESPAÇO ENGIE

## **Lisbon DHC: brief overview**

Large B2B customers account for 90% of energy sales

# CLIMAESPAÇO

**B2C market in DHC:**More than just installing meters

B2C market accounts for 10% of energy sales but 90% of the customers Residential buildings, with hundreds of individual customers

# **B2C market in DHC:**More than just installing meters

Individual metering was not the standard in DHC, but we started doing it in Lisbon 20 years ago.

### **Specific needs of B2C market:**

- Individual contracting, metering & invoicing
- Managing thousands of small customers
- Specific tools & offers designed for this particular market

#### At the moment:

- **+3.500 B2C customers** (residential & small business)
- +5.000 individual meters

## **B2C** market in DHC:

CLIMAESPAÇO

**Customer Support Service** 

# Managing B2C market is much more than managing meters! Thus, dedicated resources are needed:

- A Store/Contact Center where people get information about the service, receive price simulations and sign contracts
- A Customer Support Service in charge of managing contacts, requests or claims
- A small operational team dedicated to install, remove and maintain meters, as well as collect and input readings (while remote reading is not in operation)

# Next steps: Remote readings and customer app

### Providing additional information, for a better customer experience!

 Big data and digital tools open the possibility of collecting and sharing more information.

Our goal is not to keep it inhouse, but to share it with customers through an end-

user app.

This will provide useful information for an effective demand side energy management:

- ✓ Permanent monitoring of consumption
- √ Year on year comparisons
- ✓ Benchmarking with similar users
- ✓ Establish a link between climate and consumption
- ✓ Early detection of technical failures
- √ Forecasts
- Remote reading pilots already installed in a few buildings.
